Importance: High

Bill –

This email memorializes revisions discussed on Friday that should already be coming up through the program offices. Please let me know if that is not the case.

Tier 1 Actions:

- Biogenic: since it's at OMB and is expected to clear review before the agenda is issued, we would like to include a final rule date of November 2020.
- NSR Hourly: should bump up October
- PFAS to TRI – OCSPP communicated desire to remove this from the agenda since this specific action was superseded by NDAA.

Other priority actions:

- PEA: should bump up to June
- DLCL: since already at OMB and goal is to have out before the 1-year anniversary of DLHS, should bump up to June
- 108b rules – should bump up to October
- Peak flows – clearly not meeting the April date since it's not gone to OMB yet, so thinking is to push it to May/June

New actions:

Please send me as soon as practicable an updated list of new actions that does not include completed actions. Also, I understand the lead NAAQS update is still not included in the agenda. I spoke with Anne about this yesterday and she indicated her staff got push back from OP on getting sufficient information into the system in time. This is a priority to include and I'd like help better understanding the interaction we have with programs in adding items like this to the agenda.

Thanks,
Brittany
